MOHAMED ALI K

JAVA BACKEND DEVELOPER | SPRING BOOT | MICROSERVICES | REST APIs

mohamedali321k@gmail.com | +91 9655993363 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience working with **Java, Spring Boot, REST APIs, MySQL, JPA/Hibernate, and distributed service-based applications**. Experienced in backend feature development, API enhancement, business-logic implementation, database integration, debugging, and application issue resolution. Hands-on experience building a multi-service E-Commerce backend using **OpenFeign, API Gateway, Eureka, JWT, Docker, and separate databases**. Strong foundation in OOP, data structures and algorithms, REST API design, and Agile delivery.

TECHNICAL SKILLS

Languages: Java, SQL

Backend: Spring Boot, Spring Data JPA, Hibernate, REST APIs, Microservices

Microservices: OpenFeign, API Gateway, Eureka Server, Inter-service Communication

Databases: MySQL

Security: JWT-based Authentication & Authorization

Tools: Git, GitHub, Postman, Docker, JIRA, Confluence

Engineering: OOP, CRUD, Exception Handling, API Validation, Debugging, Root-Cause Analysis, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Engineer | Tech Mahindra | June 2024 – Present

- Developed and maintained backend components for a **broadband service platform** using **Java and Spring Boot**, supporting customer and broadband service operations.
- Developed and enhanced **REST APIs** for application requests, business logic, validations, and communication between backend components.
- Implemented business logic using **Java and Spring Boot**, following application architecture and coding standards.
- Worked with **Spring Data JPA, Hibernate, and MySQL** for entity mapping, repository operations, persistence, and database interactions.
- Analysed business requirements and implemented backend changes to support new features and enhancements within the broadband domain.
- Integrated backend services through **REST-based communication**, handling request and response flows between dependent application components.
- Investigated and resolved application issues by tracing problems across **Java service logic, REST APIs, and database operations**.
- Implemented **exception handling and input validation** to improve API reliability and provide consistent responses.
- Used **Git** for source-code management and followed Agile development practices for feature implementation and defect resolution.
- Collaborated with developers, QA, business analysts, and stakeholders during sprint planning, requirement discussions, development, testing, and release activities.
- Used **Postman** to validate REST API behaviour and verify backend changes across different scenarios.
- Maintained technical documentation in **Confluence** covering API behaviour, implementation details, and application changes.
- Recognized with the **Best Employee Award** for strong performance and contribution to team productivity.

PROJECTS

E-Commerce Microservices Backend | Java, Spring Boot, Microservices, MySQL, Docker

- Designed and implemented a distributed E-Commerce backend with independent **User, Product, Cart, and Order services**, enabling service isolation and independent scaling.
- Built order-processing workflows covering **order placement, inventory checks, and cancellation**, with validation and compensating logic for multi-service consistency.
- Implemented inter-service communication using **OpenFeign** for REST calls between services.
- Configured an **API Gateway** as a single entry point for routing and centralized cross-cutting concerns.
- Implemented centralized exception handling using **@RestControllerAdvice** for consistent error responses.
- Implemented **JWT-based authentication and authorization** for protected APIs and gateway-level access control.
- Used **Spring Data JPA, Hibernate, MySQL, DTOs, and separate databases per service** to support persistence and decoupled API contracts.
- Containerized microservices using **Docker** and validated end-to-end API flows using **Postman**.

CRUD Application | Java, Spring Boot, MySQL, Postman

- Developed a RESTful CRUD application using Spring Boot and MySQL covering Create, Read, Update, and Delete operations.
- Validated endpoints using Postman, including HTTP status codes, request handling, and database persistence.
- Applied REST API design practices including routing, error handling, and response formatting.

EDUCATION

Master of Computer Applications (MCA) | 2021 – 2023 | SRM Arts and Science College

Bachelor of Computer Applications (BCA) | 2018 – 2021 | Periyar Maniammai Institute of Science and Technology

CERTIFICATIONS & ACHIEVEMENTS

- Java Programming Completion Certificate — Core Java, OOP, Collections, Exception Handling
- Best Employee Award — Tech Mahindra (2024), awarded for exceptional performance and team contributions
